CUTTING THE COSTS OF SALES ORDER PROCESSING

By Mary Driscoll, APQC

One way to get finance executives’ attention is to show that operating cash and staff productivity are being squandered. A number of reports from APQC have done just that by using process performance metrics to illustrate gaps that are, quite frankly, indefensible. For example, we’ve looked closely at accounts payable related processes such as invoice processing. Sizeable gaps between top and bottom performance (in terms of process cost and speed) argue strongly in favor of automation.

Let’s now turn the spotlight on a business process that suffers from some of the same problems that plague invoice processing. We’re talking about sales order processing. It’s an area that continues to defy innovations such as optical character recognition, work-flow automation, electronic data consolidation, and, more recently, cloud-based software solutions.

![Total Cost to Manage Sales Orders per Sales Order Placed](image)

Looking APQC’s Open Standards Benchmarking® data in sales and order management, bottom performers incur almost 8 times more cost than the top performers (Figure 1). This metric is calculated by dividing the total cost to perform the process “manage sales orders” by the number of sales orders placed.
In the current economic climate, with demand soft in many sectors, organizations need to be on a steady hunt for waste. The shocking gap in cost performance suggests that this is an area controllers ought to investigate. Which cost components should the organization aim to optimize? They are many, and they range from the cost to maintain fax machines that receive orders to document storage. But it should be noted that the most significant cost driver is labor. And in that domain, consider not only the time (and therefore cost) required to collect and label a fax or phone order, enter data into a system, initiate work-flows that lead to order fulfillment, and communicate with the customer about the status of the order, but also consider the time and cost of an order when part of an order is lost, data entry errors are made, or a change to an order arrives. Beyond measuring the direct labor cost, be sure to look at the opportunity cost incurred of having staff performing repetitive transaction-oriented chores when they could be spending time in more valuable ways.

**PAPER-LADEN PROCESSING**

Gaining a clear view of how much an organization spends, relative to peers, to process a sales order is just the first step. Controllers will want to investigate the underlying drivers of that performance.

Unsurprisingly, organizations that rely primarily on paper-based protocols tend to incur much higher costs than organizations that have moved to electronic solutions for capturing customer orders, even those received by email (Figure 2).

*Average Cost per Sales Order by Channel*

![Figure 2](image)
This metric is calculated by comparing the average cost per sales order for these two distinct channels for order receipt. Top performers using “new” digital channels (e.g., a cloud-based service that consolidates sales order processing steps on a single platform) incur an average cost of $2.00 per sales order while top performers that rely on traditional paper-laden methods spend $7.00 per sales order. For bottom performers in each category, the picture is stark. Bottom performers in the “new channel” category incur an average cost of $6.00 per sales order. Meanwhile, bottom performers in the traditional category incur an average cost of $21.00.
SPONSOR’S PERSPECTIVE

PAPERLESS ORDER PROCESSING
Beyond reducing cost per order, automation streamlines every phase of order processing, making each order 100 percent electronic and fully visible throughout its lifecycle. This allows users to see when a particular order comes in, where it is in the system, who has it, and what the next steps are.

BENEFITING FROM AUTOMATED ORDER PROCESSING
Automated order processing allows organizations to optimize order management and benefit the entire company with: faster order processing, increased data entry accuracy, greater visibility and control, higher staff productivity, improved customer service, dashboards for monitoring daily tasks and KPIs, and other process enhancements. It’s not hard to imagine that moving to an electronic model for order processing can lead to a sound ROI.

COST SAVINGS
From a business standpoint, it’s pretty cut and dry — the ROI for an order processing automation solution is staggering. Paper-based processing, error disputes, late invoices, and lengthy processing times are not sustainable and eat up ROI. Automation reduces costs more than 50 percent by allowing all orders to be handled and processed electronically.

A bottom performing company stands to save $15 per order with an automation solution. Say they process an average of 500 orders monthly, that equates to $7,500 per month in savings — even more when employee time and supplies are factored in. Now consider your company, how much does it stand to gain?
REAL CUSTOMER FEEDBACK ON AUTOMATION

“The solution delivered visibility into every order processed across our entire department of 75-plus people. We’re processing hundreds of orders through the solution per day, so you can imagine how much time, effort, and resources this is saving us.”

—Customer Service Supervisor, MSA

“We didn’t realize how advantageous it would be to have instant access to any document within SAP. Even our CFO has been impressed by what can be tracked and measured with just the click of a button.

—Senior VP of Information Systems, Valdese Weavers

“Ultimately, we found that automation could help us provide higher quality customer care and faster turnaround time versus simply hiring more staff. And, the ability to grow as a company without growing our team was big for our bottom line.”

—Director of Customer Experience, Parts Town

ABOUT ESKER

Esker is a worldwide leader in cloud-based document process automation software. Organizations of all sizes use its solutions to automate critical areas of business communication. For the past 30+ years, Esker has helped over 11,000 companies around the world Quit Paper™ and improve operational efficiency. Its headquarters are located in Lyon, France, but you can find Esker just about anywhere paper needs quitting.

ABOUT APQC

APQC helps organizations work smarter, faster, and with greater confidence. It is the world’s foremost authority in benchmarking, best practices, process and performance improvement, and knowledge management. APQC’s unique structure as a member-based nonprofit makes it a differentiator in the marketplace. APQC partners with more than 500 member organizations worldwide in all industries. With more than 40 years of experience, APQC remains the world’s leader in transforming organizations. Visit us at www.apqc.org, and learn how you can make best practices your practices.
